

*Call for Authors*

## **Mathematical Engineering, Manufacturing, and Management Sciences**

**A BOOK SERIES FROM CRC PRESS**

**Series Editor: Mangey Ram**

The main aim of the book to publish the original research studies and articles that bring up the latest development & research applied mathematics and its applications in engineering, manufacturing, and management sciences areas. The book series “*Mathematical Engineering, Manufacturing, and Management Sciences*” engrossed on a comprehensive range of applied mathematics and its application in engineering, manufacturing, and management areas ( for example optimization techniques, finite element methods in engineering, differential equations and its applications, fluid dynamics and its applications in engineering, mathematical modelling & simulation, stochastic process & system engineering, safety-critical system performance; system safety; system security, high assurance software architecture and design, mathematical modelling in environmental and bio sciences etc.).

The hot areas for this new series are:

- Advanced Manufacturing Processes
- Applied Mathematical Problems & Methods in Research & Education
- Casting, Control and Automation
- Differential Equations and its Applications
- Financial Engineering
- Finite Element Methods in Engineering
- Fluid Dynamics and its Applications in Engineering
- High Assurance Software Architecture and Design
- Knowledge and Information Management
- Lean Manufacturing
- Logistics and Supply Chain Management
- Machine-System
- Management and Control Of Production
- Manufacturing Process Monitoring
- Manufacturing Processes
- Marketing Engineering
- Mathematical Approaches in Engineering Applications
- Mathematical Modelling and Simulation
- Mathematical Modelling in Environmental and Bio Sciences
- Molding processes, Nano Fabrication
- Operations Management
- Operations Research and Management
- Optimization Techniques
- Organizational and Economical Methods
- Organizational Behaviour
- Other Mathematics Applications in Engineering
- Planning and Scheduling
- Policy Modelling and Public Sector
- Product Life Cycle Management
- Production and Operations Management
- Production Economics
- Production Management
- Products and Recycling Systems
- Quality and Applied statistics
- Quality Control
- Queuing Theory
- Rapid Manufacturing and Repair
- Rapid prototyping, Stereolithography
- Recent Mathematical Tools & Techniques in Engineering and Technology
- Recycling and Reuse Management
- Recycling, Materials and Industrial Wastes
- Reliability Modelling for Complex Systems
- Renewable Energies Technology
- Revenue & Risk Management
- Safety-Critical System Performance
- Scheduling and Logistics
- Services Management
- Soft Computing, Genetic Algorithm, Neural Network & Fuzzy Logic Applications
- Statistical Approach to Manufacturing Engineering
- Stochastic Process and System Engineering
- Strategic Management
- Subtractive Manufacturing
- Supply Chain Performance Management
- Sustainability of Processes (Economic and Environmental)
- Sustainable and Green Manufacturing
- Sustainable Engineering
- System Safety; System Security
- Systems Reliability in Manufacturing Engineering
- System-system Collaboration
- Thermal Processes Engineering
- Welding Process

### **PROPOSALS MAY BE SUBMITTED TO:**

**Dr. Mangey Ram**

Professor

Department of Mathematics; Computer Science and Engineering

Graphic Era University, Dehradun, INDIA.

drmrswami@yahoo.com

**Cindy Renee Carelli**

Executive Editor

CRC Press – Taylor & Francis Group

cindy.carelli@taylorandfrancis.com
