Advanced Research in Reliability and System Assurance Engineering

A BOOK SERIES FROM CRC PRESS

Series Editor: **Mangey Ram**

The main aim of the book to publish the original research studies and articles that bring up the latest development & research of reliability and system assurance engineering areas. Reliability analysis and system assurance engineering are the strength of engineering sciences. Reliability analysis and system assurance engineering forms the common foundation of all novel discipline as engineering evolves and develops. The book series “**Advanced Research in Reliability and System Assurance Engineering**” engrossed on a comprehensive range of reliability and system engineering (for example reliability-centered maintenance; risk-informed asset management; safety-critical system performance; system safety; system security; assurance techniques for service-oriented systems; business models; fault tolerant system design; high-assurance embedded systems; high assurance software architecture and design; maintenance strategies etc.). This book series publishes the original & unpublished chapters those developing the advance research in reliability theory and system assurance engineering field; conveys the innovative research ideas; the real-world utility, and has a prodigious significance in the life of academics, practitioners, researchers and industry leaders.

The hot areas for this new series are:

- Assurance Techniques for Service-Oriented Systems
- Business Models
- Complex Systems
- Condition Monitoring
- Design Policy
- Diagnostics and Decision Support
- Fault Tolerant System Design
- Graded Quality Assurance
- High Assurance Embedded Systems
- High Assurance Software Architecture and Design
- Maintenance Management of Large Engineering Systems
- Maintenance Strategies
- Modeling, Simulation and Optimization of Complex Systems
- Multi-State Systems
- Networks Reliability
- Networks Theory
- Numerical Simulations
- Organization and Economical Methods
- Power System Reliability
- Probabilistic Safety Assessment
- Product Lifecycle Management
- Product Support
- Reliability Analysis
- Reliability Applications
- Reliability Centered Maintenance
- Reliability in Engineering Design
- Risk Informed Asset Management
- Safety-Critical System Performance
- Service Engineering and Service Design
- Software Quality Assurance and System Integration
- Stochastic Modeling
- System Analysis
- System Engineering
- System Safety
- System Security
- Uncertainty Analysis
- Web Services

PROPOSALS MAY BE SUBMITTED TO:

Dr. Mangey Ram

Professor
Department of Mathematics; Computer Science and Engineering
Graphic Era University, Dehradun, INDIA.
