

The main aim of this series is to publish the original articles that bring up the latest development & research in mathematics, engineering and its applications (in short form titles between 20,000 to 50,000 words or 100-125 pages). The book series “*Advances in Mathematics & Engineering*” engrossed in a comprehensive range of mathematics and engineering areas. This book series includes (but not limited to) the mathematical sciences, engineering sciences, engineering and technology, physical sciences, numerical and computational sciences, space sciences, meteorological sciences. Books published in the series include research monographs, edited volumes, handbooks and textbooks. The books provide professionals, researchers, educators, and advanced students in the field with an invaluable insight into the latest research and developments.

The hot areas for this new series are:

- Aerodynamics and fluid mechanics
- Applied non-linear dynamics and non-linear control
- Applied thermodynamics
- Approximation theory
- Artificial intelligence
- Assurance techniques for service-oriented systems
- Automation and control
- Bayesian nets
- Bioengineering materials, biomechanics and bio tribology
- Collaborative design
- Computational Intelligence
- Computational mechanics
- Computer applications
- Computer software
- Computer-based manufacturing technologies
- Computing and information technologies
- Continuous and discrete optimization
- Creativity and innovation
- Decision analysis and decision support
- Design and manufacturing
- Design architectures
- Design costing
- Design optimization approaches
- Design risk and uncertainty
- Design theory and methodology
- Diagnostics and decision support
- Difference equations and their applications
- Discrete applied mathematics
- Engineering decisions under uncertainty
- Engineering design for safety and reliability
- Engineering management
- Environment, energy and natural resources
- Fault tolerant system design
- FEM modelling and simulation
- Financial engineering
- Finite element analysis
- Fluid mechanics, hydrodynamics
- Functionality graded materials, cellular materials
- Fuzzy set theory
- Genetic algorithms
- Heat and mass transfer
- Heat treatments, microstructure and materials properties
- Heuristics
- High assurance embedded systems
- High assurance software architecture and design
- Human factors and HCI
- Inclusive design and assistive technology
- Industrial design and total design
- Industrial engineering
- Informatics and oscillation theory
- Information technology and management
- Instrumentation and measurement
- Integrated design development
- Lean manufacturing
- Logistics and supply chain management
- Machinability and formability of materials
- Machining (traditional and non-traditional processes)
- Maintainability, sustainability, safety and standards
- Maintenance management of large engineering systems
- Maintenance strategies
- Manufacturing automation and e-Business
- Manufacturing design for 3r “reduce, reuse, recycling”
- Manufacturing engineering and technology
- Manufacturing industries
- Manufacturing policy formulation and evaluation
- Manufacturing strategy
- Markov chains
- Mathematical biology
- Mathematical economics
- Mathematical modelling
- Mathematical problems
- Mechanisms and machines
- Mechatronics and robotics
- Modelling, simulation and optimization of complex systems
- Networking and security
- Networks
- New product design and development
- Numerical methods
- Operations research
- Operations engineering and analytics
- Optimal control
- Optimization methods
- Ordinary differential equations
- Organizational behaviour
- Partial differential equations
- Probabilistic and non-probabilistic safety assessment
- Probabilistic safety assessment
- Product design and optimization
- Product design for environment
- Production and operations management
- Production economics
- Production management
- Production systems and automation
- Queuing theory
- Recycling
- Recycling, materials and industrial wastes, products and recycling systems
- Reliability assessment methods
- Reliability centred maintenance
- Reliability in engineering design
- Reliability-based condition assessment
- Reliability-based design optimization
- Renewable energies technology
- Robustness and uncertainty
- Safety-critical system performance
- Sensor networks
- Service design and design services
- Service engineering and service design
- Simulation
- Soft computing
- Software quality assurance and system integration
- Stochastic finite elements
- Stochastic models
- Supply chain performance management
- Sustainable and green manufacturing
- Sustainable engineering
- System modelling including simulation
- System reliability
- Systems design and design complexity
- Systems engineering
- Systems security
- Telecommunications
- Thermodynamics and heat transfer
- Transportation
- Tribology and surface engineering
- Turbulence theory
- Uncertainty analysis
- Vibration and acoustics

PROPOSALS MAY BE SUBMITTED TO:

Dr. Mangey Ram
 Professor
 Department of Mathematics; Computer Science and Engineering
 Graphic Era (Deemed to be University), Dehradun, INDIA.

CRC PRESS FOCUS BOOKS

A New Series of Books from CRC Press

CRC Press Focus books are short form titles available very quickly as eBooks and as POD (print-on-demand) Hardbacks.

Advantages for Authors

- **Speed to market** – 10–12 weeks from submission to publication.
- **Topicality** – Allows you to respond quickly to current affairs and contemporary issues and policies.
- **Flexibility** – Perfect for situations where you have too much material for an article, but not enough for a full-length book.
- **Accessibility** – Helps you to make your research findings concise and accessible.
- **Impact** – Format, quick timeframe, and competitive pricing helps your work to impact upon policy and practice.
- **Quality** – All titles will be subject to our usual high standards of peer review.
- **Remuneration** – Authors/editors receive a standard Focus royalty (3%) and benefit additionally from any subsidiary rights arrangements.
- **Global Market** – You will have all the benefits of your short form title being marketed, sold, and distributed by a major international Academic Publisher with genuinely global coverage.

Format

- **Length** – 20,000 to 50,000 words (5.5" x 8.5" trim/100-125 pages.) including notes and references.
- **Format** – Each CRC Press Focus title will be published as an eBook (suitable for reading on your e-reader, laptop, mobile device, or tablet, and accessible via library collections). For those that still prefer print, there will be a simultaneous print-on-demand Hardback available.
- **Single or Multi-Authored/Edited Collection** – Both authored books and edited collections can be submitted.

Content

Titles published in the CRC Press Focus program could include:

- A short overview of an emerging area or “hot topic.”
- A detailed case-study.
- Reworking of research for a policy audience.
- Analytical or theoretical innovations.
- A timely response to current affairs or policy debates.
- Information and analysis for professionals and practitioners within a certain field.
- Edited collection with a variety of viewpoints.

Want to Publish with Us? If you are interested in publishing a CRC Press Focus title, please contact: **Cindy Renee Carelli**  **Executive Editor**  **CRC Press – Taylor & Francis Group**  **Email:** cindy.carelli@taylorandfrancis.com  **Phone:** 352-536-9510
